
Algorithm 1 Binary Search

```
function BINSEARCH( $A, low, high, target$ )  
   $mid = (low + high)/2$   
  if  $target == A[mid]$  then  
    return  $mid$   
  else if  $target > A[mid]$  then  
    return BINSEARCH( $A, mid, high, target$ )  
  else  
    return BINSEARCH( $A, low, mid, target$ )  
  end if  
end function
```
